                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Score

The invention relates to a peptide conjugate having the formula: (R-X)n-peptide where n = 1-10; x = C-O, when the R-X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = O or NH, when the R-X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COON or CONH2; and R = 2-18C alkyl or alkoxy, 2-18C alkylenyl containing one or two double bonds, cyclobusyl, cyclopentyl, cyclohexyl opstionally monosubstituted with a 1-5C straight or branched chain alkyl group,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the BH3 domain of human BAK.
The invention relates to a bcl homology domain 3 (BH3 domain),
derived from a proapopictic member of the BCL-2 family. The
BH3 polypeptide can be used in a method for promoting apoptosis in a
target cell. especially where the cell is a cancer cell a virus infected
cell or an autoantibody producing cell. The BH3 polypeptide can be used
in therapeutic compositions for treating disease including cancer; other
lymphoproliferative conditions, arthritis, inflammation, and autoimmune
diseases, which may result from the down regulation of cell death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cytostatic, neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bel-1 superfamily; BB domain; cell death agonist; Bed; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric, non-small lung; tensi; thyroid; neuroblastoms; melinoms; lymphocytic_leukemia; neurodegenerative disorder; AIDS;
                                                                                                                                                                      Claim 18;

                                                                                                                                                                                                                                                                                                                                           phenyl optionally monosubstituted with a 1-5C straight or branched chain ally group, or benzyl. The peptides AAB37001-37058 represent examples cof the peptides portion of the conjugate. The peptides represent analogues cof the gall domain of the conjugate are present analogues. The BBL-2 superfamily polypeptide corresponding to amino acids 72-97 of the BBJ domain of the cell death agonist BBL. The peptide conjugate is useful for modulating apoptosis in the cells of a subject or for reversing B cell lymphomal/leukemia 2 (BCL-2)-mediated blockage of capoptosis in cancer cells. It is also useful for inhibiting Bcl-2 apoptosis in particular, the peptide conjugate is useful for treating a subject afflicted with a cancer conjugate is useful for treating a subject afflicted with a cancer characterized by cancer cells that express Bcl-2. The cancer includes prostate, colorectal, gastric, con-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or acute or chronic lymphocytic and non-lymphocytic laukemia. The peptide conjugate is also useful for treating disorders characterized by cancer acquired conjugate is also useful for treating disorders characterized conjugate is also useful for treating disorders characterized by cancer acquired conjugate is also useful for treating disorders characterized by cancer acquired conjugate is also useful for treating disorders characterized by cancer acquired conjugate is also useful for treating disorders characterized by cancer acquired conjugate is also useful for treating disorders characterized by cancer acquired conjugate is also useful for provider acquired to the conjugate is also useful for treating disorders acquired conjugate is also useful for treating disorders acquired to the conjugate is also useful for treating disorders acquired to the conjugate is also useful for treating disorders acquired to the conjugate is acquired to the conjugate is acquired to the conjugate is acquired to the conjugate is acquired to the conjugate is acquired to the conjugate is acq

protein, antimycin useful derivatives that bind to antiapoptotic Bcl-2 for modulating the apoptotic state of a cell family

Example 6; Page 41; 60pp; English.

The present sequence was used in an example illustrating an invention relating to an antimycin derivative which modulates apoptosis by binding to a Bc1-2 family protesin and preferentially induces apoptosis in a cell which over expresses the Bc1-2 family protesin. The antimycin derivative is used in treating an apoptosis associated disease and for inducing apoptosis. It is also useful for treating empaphasis and drug resistance. The present sequence binds to the hydrophobic poket of Bc1-2. A competitive binding assay was used to determine if the site of antimycin A3 interaction the hydrophobic pocket

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QS
The invention relates to a peptide conjugate having the formula:

(R*X)n*peptide where n = 1-10; X = C=0, when the R*X group is attached to the N*terminus of the peptide, or a side chain of the peptide where c the functional group of the side chain is NH2 or 0H; or X = 0 or NH.

CC when the R*X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain is NH2 or 0H; or X = 0 or NH.

CC or two double bonds, cyclobutyl cyclopentyl cyclobexyl optionally components and the peptide with a 1-5C straight or branched chain akyl group, or benzyl. The peptides ANB37001-B37058 represent examples of the peptide pertion of the conjugate The peptides can analogues of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of the Billy domain of the coll death agonist Had. The peptide conjugate is useful for modulating apoptosis in the cells of a subject, or for reversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockage of subject affilted with a cancer characterized by cancer cells that conspess Bcl-2. The cancer includes prostate, colorectal, gastric, consmall lung, renal or thyroid cancers, beuroblastcma, melanoma, or acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present sequence is the mammalian Bak BCI-2 homology domain 3 (BH3) domain, which was used in a sequence alignment with the same domain of a putative version of the mammalian apportosis regulator BBC3, which was designated BBC3-ORF2. The BBC3 protein, nucleic acids and antibodies are suitable for use in promoting cell death or for preventing apoptosis in mallynant cells and those caus autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel polymucleotide encoding a BBC3 protein which is useful for modulating apoptosis, especially in the treatment of cancer and autoimmune diseases \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             conjugate is also useful for treating disorders characterized by increased approasts e.g. neurodesgenerative disorders, acquired immunodeficiency syndrome (AIDS), stroke or myocardial infarction

BAD polypeptides and can be used as an apoptosis inducer or inhibitor. BAD polypeptides are polynucleotides can be used if or settival or apoptosis inducer or inhibitor. BAD polypeptides are compounds induction of inhibiting apoptosis in a cell. Candidate compounds inducting or inhibiting apoptosis in a cell. Candidate compounds indentified and (mutant) BAD polypeptides are useful in treating immunodeficiency diseases, neurodegenerative diseases, intender cell survival or approaches are useful in treating immunodeficiency conditions, arithritis, infertility, infammation and autolumnume diseases. The present sequence represents a Bci family member threating consees as sequence which is used in an example from the

The invention relates to a peptide conjugate having the formula:

(R * N)n * Peptide where n = 1.10; X = C=0, when the R * X group is attached to the N-terminus of the peptide, or a side chain of the peptide where the functional group of the side chain is NH2 or OH; or X = 0 or NH, CC when the R * X group is attached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is group is trached to the C-terminus of the peptide, or a side chain of the peptide, where the side chain functional group is COOH or two double bonds, cyclobuty1, cyclopenty1, cyclopenty1, cyclobexy1 containing one or two double bonds, cyclobuty1, cyclopenty1, cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobexy1 cyclobe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptide conjugates for modulating apoptosis or for inhibiting B cell lymphoma/leukemia 2 (Bel-1) function, especially useful for treating neurodegenerative disorders, stroke, or cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic; neuroprotective; enti-NIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; BBd; apoptosis modulation; B cell lymphome/Leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; hupphocytic leukemia; neurodegenerative disorder; AIDS; stroke; myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 18; Page 17; 74pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The term GD domain refers to a protein domain first identified in Bak and shown to be essential for the interaction of Bak with Bcl.x(L) and for Bak's cell killing function; and to peptides and/or molecules capable of minicking its structure and/or function. The present sequence represents a GD domain corresponding to amino acid residues 67-94 of Bak. An antibody raised against a GD domain may be used to screen a CDNA expression library for clones comprising cDNA inserts encoding immunocrossreactive proteins. Truncated GD domain peptides have been shown to maintain the protein binding and cell killing function exhibited by wild type Bak. These molecules may induce apoptosis in tumour cell. These peptides act independently of p53 status. Bak or GD domain mimetics that inhibit Bcl-2 may be selectively toxic to certain timustres.

A nucleotide sequence encoding Bak-delta2-TM was obtained from CDNA by PCR and cloned as an in-frame fusion to the GAL4-DNA binding domain in vector pAS2-1. The construct was used in a two-hybrid screen of human heart cDNA for the identification of clones encoding Bak binding proteins. The invention relates to a novel Bak binding protein (BBP, see AAW79537), the gene encoding BBP (see AAV61499), methods for detecting substances that alter the specific binding between Bak and BBP, as well as diagnostic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New Bak-binding protein and related nucleic acid, vectors, transformed cells and antibodies - are useful for modulation of apoptosis in cancer, neuro-degeneration etc., also peptide fragments of Bak that interact with the profess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Expression of Cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell survival in response to anti-Pas-mediated apoptosis. Deletion of the N-terminal 59 amino acids of Cdn-1 only slightly decreased this activity, suggesting that small, truncated Cdn-1 molecules may be potent therapeutics.
                                                                                        Cdn-1 cDNA was isolated from a human heart cDNA library using a previously isolated clone as probe. Recombinant Cdn-1 was produced in Sf9 and human colon adenocarcinoma HT99 cells. Expression of cdn-1 in WI-L2 lymphoblastoid cells resulted in increased cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cdn-1; apoptosis modulator; adoptive immunotherapy; therapy; HIV; autoimmune disease; reperfusion injury; hepatitis, osteoporosis;

Expression of Cdn-2 in mouse progenitor B-cell FL5.12 cells decreased IL-3-induced apoptosis. The Cdn-2 protein displayed 97% amino acid identity with Cdn-1 (AAR77876).

This Bak protein sequence represents a bc1-1 homologue which interacts with Epstein-Barr virus (EEM) early lytic cycle BHRF1 protein, and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein, in a new virucide drug screening method, which involves combination of Bak protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak and viral proteins allows viral replication or latency in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or disport in contraction may be used as virucide, antitumour or disport in contraction may be used as virucide, antitumour or disport in contraction may be used as virucide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Epstein-Barr virus; BHRF1; fusion protein; epitope tag; brytein goreening; co-precipitation; ELISA; immunoassay; antibody; protein interactive trapping; virucide; antitumour; diagnostic.

                                                                                                                                                                                                                                                                                         This Bak-2 protein sequence represents a bol-1 homologue which interacts with Epstein-Barr virus (EBV) early lytic cycle BHRF1 protein and is capable of modulating apoptosis. The protein may be used in complete or partial form, or as an epitope tag fusion protein in a new virucide drug screening method, which involves combination of Bak-2 protein and a viral protein (e.g. EBV BHRF1), exposure to a test compound, and monitoring for disruption of the interaction, e.g. by co-precipitation, protein interactive trapping or ELISA. Interaction of Bak-2 and viral proteins allows viral replication or lateory in the absence of apoptosis. Compounds which inhibit the interaction may be used as virucide, antitumour or disapped to the protein and the protein sequence of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Screening for anti-viral agents - by detecting the ability of an agent to disrupt the interaction of a Bak protein and a viral protein

OM protein - protein search, using sw model

Run on: September 20, 2002, 10:39:09 ; Search time 95.59 Seconds (vithout alignments)

16.084 Willion cell updates/sec

Pitle: US-09-544-664-30

Perfect score: B0
Sequence: 1 GyorgoLAIIGDDINR 16

Scoring table: BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 283138 seqs, 96089334 residues

Total number of hits satisfying chosen parameters: 283138

Minimum DB seq length: 0

Maximum DB seq length: 2000000000
```

Prod. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ; Search time 44.99 Seconds (without alignments) 13.770 Million cell updates/sec

SHECELLILAR LOCATION: Membrane-bound (Potential).

TISSUES SPECIFICITY: EXPRESSED IN A WIDE VARRETY OF TISSUES, WITH HICHST LEVELS IN THE HEART AND SKELERAL MUSCLE.

DOMAIN: INTWCT BH3 DOMAIN IS REQUIRED BY BK. BHD, BAK, BAD AND BAX FOR THEIR FRO ADDPFOTIC ACTIVITY AND FOR THEIR INTERACTION WITH ANTI-ACOPTOTIC MEMBRERS OF THE BCL-2 FAMILY.

SAMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 1 (BH1).

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 2 (BH2).

SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3).

SIMILARITY: BELONGS TO THE BCL-2 FAMILY.

-: SUBCELULIAR LOCATION: INTEGRAL membrane protein (By similarity).
-: SIMILARITY: BELONGS TO THE CATION TRANSPORT ATPASES FAMILY
(E1-E2 ATPASES), SUBFAMILY IB.
-: SIMILARITY: CONTAINS 2 HMA DOMAINS.
